How to Get Host SSH Key Fingerprints

Here’s a short command line statement that will fetch the host ssh key fingerpring without authenticating with it:

```
ssh-keyscan host | ssh-keygen -lf -
```

Here’s another way to clean up ssh host key fingerprints:

```
# remove any old fingerprints for the host
ssh-keygen -R server.example.com
# add SSH fingerprints for the host
ssh-keyscan -t ecdsa,ed25519 -H server.example.com >> ~/.ssh/known_hosts 2>&1
```
