

Docker Space Full

Here are some things to check on when the disk on a docker host gets full.

```
sudo docker system prune -a -f
```

This will cleanup other resource types:

```
docker system prune -a
```

This command will remove older logs from the container logs folder:

```
sudo find /projects/container_logs/ -type f -mtime +7 -name '*.log' -exec rm {} \;
```

This command will remove logs from the container folder:

```
sudo find /var/lib/docker/containers/ -name "*-json.log" -exec truncate -s 0 {} \;
```

This command will remove older logs from the /var/log/oga folder:

This takes care of logs generated by naked services.

```
sudo find /var/log/oga/ -type f -mtime +7 -name '*.log' -exec rm {} \;
```

This command will remove older logs from the /var/log/bliss folder:

This takes care of logs generated by naked services.

```
sudo find /var/log/bliss/ -type f -mtime +7 -name '*.log' -exec rm {} \;
```
