

# HowTo Retrieve Key and Cert from PFX

Here's a good article on how to export SSL certificates, extract the key and certificate, and import it into AWS.

[How To Convert Windows PFX Certificate Files Into PEM Format On Linux](#)

The above article uses openssl, which can be found for Windows, here:

[Win32/Win64 OpenSSL Installer for Windows - Shining Light Productions](#)

As well, the above article has an error in Step 4, that removes the password from the key.pem to create the raw private key file.

That command should be:

```
openssl rsa -in key.pem -out server.key
```
